ABSTRACT

The present application discloses a brake actuator for applying tension to a brake cable. The actuator includes: a mounting bracket; a brake actuator lever mounted for pivotal movement relative to the mounting bracket in brake applying and brake releasing directions; and a cam-and-drum member mounted for rotation relative to relative to the brake actuator lever. The cam-and-drum member is formed as one integral part including a protruding drum portion and a cam portion integral with the drum portion. The present application also discloses a brake actuator with a one-piece cam member.
